IMPORTANT NOTIFICATION

Applicant

FISH, Robert, Benham, Jr. et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

#### 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the international Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

# INTERNATIONAL PRELIMINARY InterEXAMINATION REPORT - SEPARATE SHEET

International application No. PCT/CA98/00875

Reference is made to the following documents:

D1: EP-A-0 027 375 (TOA NENÄYO KOGYO KK) 22 April 1981

D2: WO 95 16750 A (DU PONT ;HAYASHI RYUICHI (JP); KOSHIDA REIKO (JP)) 22 June 1995

D3: US-A-5 451 639 (MARCZINKE BERND L ET SEQ. AL) 19 September 1995

D4: 'GRAFTED HETEROPHASIC POLYMERS FOR THE IMPACT MODIFICATION OF NYLON' RESEARCH DISCLOSURE, no. 358, 1 February 1994, page 84 XP000439817

#### Re item III

For the figure 0.9 in the claim 2, received 25 January 2000, a basis in the original documents was neither specified, nor could it be found (Art. 19(2), 34(2)b PCT).

#### Re item V

#### **Novelty**

In D1 unusual high Melt flow indices (MI) values are disclosed (page 10, lines 1-5) apparently due to the use as laminating resin.

In the application the upper limit of MI is 5 g/min (claim 1). Thus, the subject matter of the claims is novel over D1.

D2 - D4 relate to the same technical field as the application namely toughener compositions for polyamides on the basis of blends of two olefine copolymers that are cografted with olefinic carboxylic acids or their anhydrides, typically maleic acid anhydride

#### However:

In D2 the densities are not mentioried in D2. Moreover (claim 1) component (a) is a cyclic poly olefin, whereas in the application component (a) is a copolymer of ethylene and an  $\alpha$ -olefin having at least 4 carbon atoms.

In D3 a mixture of two propylene copolymers is cografted.

According to D4 a blend of an ethylene- propylene rubber (b) in a propylene-ethylene copolymer or a propylene  $C_{4^{-10}}$   $\alpha$ -olefin copolymer (a) is cografted. According to the application (a) is a copolymer of ethylene and an  $\alpha$ - olefin having at

# INTERNATIONAL PRELIMINARY International application No. PCT/CA98/00875 EXAMINATION REPORT - SEPARATE SHEFT

least 4 carbon atoms. Also the densities are not mentioned.

Thus, novelty (Art. 33(2) PCT) is given.

#### Inventive step

Since D1 refers to a another technical field, it cannot be used as starting point for the assessment of inventive step.

However, it is unclear <u>which technical problem</u> is solved by the <u>respective distinguishing</u> <u>features</u> (e.g. selection of densities) in a non obvious way. Thus, it is unclear as to whether and how inventive step might be established over D2 - D4.

On the basis of the evidence submitted, it appears doubtful as to whether or not to problem to avoid massing is linked with the respective distinguishing features. The authors of D2 to D4 do not report that they encountered massing problems nor had they to employ a partitioning agent (as formulated in the application on page 2, I. 23). This is in line with the explanation in the description on page 4, lines 13-15: "In particular, the use of the ethylene  $\alpha$ -olefin in pre-grafted blend eliminates the need for either a pre-modification or post-modification partitioning agent." Since also in D2 to D4 the (rubbery) elastomers were used in combination with ethylene  $\alpha$ -olefin copolymers, it appears to be logical that also the authors of D2 to D4 did not encounter a general problem of massing.

In another formulation: it appears that the problem was already solved in D2 to D4 without this being stated explicitly.

## Independent process claim 14 and process claims 15 to 17

The grafting of a blend of two olefin polymers (in overlapping amounts) in an extruder at an overlapping barrel temperature (50 -295°C, page 10, lines 13-17) and the blending of the cografted polyolefins with polyamide is disclosed in D2, e.g. claims 1 and 3; this refers to claims 13, 14, 16.

## INTERNATIONAL PRELIMINARY

International application No. PCT/CA98/00875

**EXAMINATION REPORT - SEPARATE SHEET** 

D2 further discloses polyamide 6 and 66 (p. 3, I. 19 and 22) and the absence of a partitioning agent; this refers to claims 1, 15 and 17.

Thus the process features as such are not novel or well known in the art.

Novelty of the process is established by component (a) of the starting materials (cf.. the analysis as to claim 1).

Since it appears that the use of the component (a) as claimed (i.e. the distinguishing feature) does not involve inventive step, the same applies for the process as a whole.

All claims: Industrial applicability (Art. 33(4) PCT) is given.

#### Re item VII

With the amended version of page 20S, received on 25 January 2000, in example 27 the value for dryflow was amended from 1.09 to 109. This amendment introduces subject-matter which extends beyond the content of the application as filed, contrary to Article 19(2) PCT.

#### Re Item VIII

Certain observations on the international application

As to the feature "massing" the following is noted:

This is a unusual feature: cf.. PCT Preliminary Examination Guidelines, Chapter III, 4.7a " The examiner should be aware of the possibility that applicants may attempt to employ unusual parameters to disguise lack of novelty."

The term "massing" is a relative term only and thus, obscure. In the description on page 20 it explained "the massing tendencies were evaluated by subjecting the polymer under a pressure of 100 g/cm² for a period of 24 hrs. ... At the end of the period, the polymer was inspected to see if the pellets have massed together and if so, whether the mass can be broken up."

This is not a clear definition since no boundaries are given.

# INTERNATIONAL PRELIMINARY International application No. PCT/CA98/00875 EXAMINATION REPORT - SEPARATE SHEET

The feature "massing" may be tolerable in the claims for purely illustrative purposes; the feature, however, cannot be used for defining the subject matter of the application (Art. 6 PCT, clarity; PCT Preliminary Examination Guidelines, Chapter III, 4.5).

As to "toughening agent useful for improving the impact properties of polymeric compositions" (claims 1, 9, 14):

"toughening agent " represents an attempt define the subject matter of the claims or a part thereof by the the result to be achieved. This normally is not admissible (Art. 6 PCT; PCT Preliminary Examination Guidelines, Chapter III, 4.7).

Since "useful for" must be construed as meaning merely " suitable for", such a passage normally does not represent a limitation (Art. 6 PCT; PCT Preliminary Examination Guidelines, Chapter III, 4.8).

The extremely broad content of the passage in the **description** on page 16, line 24 to page 17, line 8 (here just only a blend of "at least one polymer and PE") is in contradiction with the claims (Art. 6 PCT).

Claim 11: (any) "graft monomer" is not supported by the description (Art 6 PCT). - It appears that any chemical product is somehow "a fabricated material"; cf.. Collins English Dictionary, key word "fabricate" = "to make, build, devise, invent". Thus, this term in the context given is devoid of any further meaning.

The expression "such as" has no limiting effect, the feature following ("moulded automobile parts") should be regarded as entirely optional (Art. 6 PCT; PCT Preliminary Examination Guidelines, Chapter III, 4.6).
